TABLE 36A: ABOUT 169 GENES UP-REGULATED IN KIDNEY CANCER
Table 36A lists about 169 genes up-regulated in kidney cancer compared to normal kidney that are likely to be extracellular or cell-surface proteins. These were selected as for Table 35A and the predicted protein contained a structural domain that is indicative of surface or extracellular localization (e.g. ig, fn3, egf. 7tm domains). Predicted protein domains are noted.

          TABLE 40A: ABOUT 977 GENES UP-REGULATED IN STOMACH CANCER
          Table 40A fists about 977 genes up-regulated in stomach cancer compared to normal adult fissues. These were selected from $9680 probesets on the Affymetrix/Eos Hu03 Gene/Chip array such that the ratio of "average" stomach cancer to "average" normal adult fissues was greater than or equal to 2.0. The "average" stomach cancer level was set to
          the 90th percentile amongst various stomach cancers. The 'everage' normal adult tissue level was set to the 90th percentile amongst various non-malignant tissues. In order to
           remove gene-specific background levels of non-specific hybridization, the 15th percentile value amongst various non-malignant tissues was subtracted from both the numerator and
20
           the denominator before the ratio was evaluated.
                               Unique Eos probeset identifier number

TABLE 41A: ABOUT 634 SEQUENCES UP-REGULATED IN STOMACH CANCER
Table 41A lists about 634 genes up-regulated in stomach cancer compared to normal adult tissues that are likely to be extracellular or cell-surface proteins. These were selected as Table 41A lists about 634 genes up-regulated in stomach cancer compared to normal adult tissues that are likely to be extracellular or cell-surface proteins. These were selected as Table 40A and the predicted protein contained a structural domain that is indicative of extracellular localization (e.g. ig, fn3, egf. 7tm domains). Predicted protein contained a structural domain that is indicative of extracellular localization (e.g. ig, fn3, egf. 7tm domains). 10

            TABLE 42A: ABOUT 561 GENES UP-REGULATED IN STOMACH CANCER
            Table 42A lists about 561 genes up-regulated in stomach cancer compared to normal stomach. These were selected as for Table 40A except using various non-malignant stomach
            specimens in determining the denominator value.

           TABLE 43A: ABOUT 339 GENES UP-REGULATED IN STOMACH CANCER
           Table 43A lists about 339 genes up-regulated in stomach cancer compared to normal stomach that are likely to be extracellular or cell-surface proteins. These were selected as for Table 42A and the predicted protein contained a structural domain that is indicative of surface or extracellular localization (e.g. ig, In3, egf, 7tm domains). Predicted protein domains
20
           are noted.

TABLE 44A: ABOUT 314 GENES DOWN-REGULATED IN STOMACH CANCER

Table 44A lists about 314 genes significantly down-regulated in stomach cancer compared to normal stomach. These were selected as for Table 42A, except that the numerator and 80 denominator were switched.

TABLE 45A: ABOUT 947 GENES UP-REGULATED IN STOMACH CANCER COMPARED TO NORMAL ADULT TISSUES

Table 45A lists about 947 genes up-regulated in stomach cancer compared to normal adult tissues. These were selected from 59680 probesets on the Affyrmetrix/Eos Hu03

GeneChip array such that the ratio of "average" stomach cancer to "average" normal adult tissues was great that the ratio of somethic cancers. The "average" normal adult tissue level was set to the 90th percentile amongst various non-malignant tissues. In order to the 90th percentile background levels of non-specific hybridization, the 15th percentile value amongst various non-malignant tissues was subtracted from both the numerator and the denominator before the ratio was evaluated.

           TABLE 46A: ABOUT 1303 GENES UP-REGULATED IN STOMACH CANCER COMPARED TO NORMAL STOMACH
           Table 46A lists about 1303 genes up-regulated in stomach cancer compared to normal stomach. These were selected as for Table 45A except using non-malignant stomach
           specimens in determining the denominator value and the ratio was equal to or greater than 5.0.
                               Unique Eos probesel identifier number

          TABLE 47A: ABOUT 370 GENES SIGNIFICANTLY DOWN-REGULATED IN STOMACH CANCER COMPARED TO NORMAL STOMACH
          Table 47A lists about 370 genes significantly down-regulated in stomach cancer compared to normal stomach. These were selected as for Table 46A, except that the numerator and
          denominator were switched and the ratio was equal to or less than 0.33.

          TABLE 48A: ABOUT 426 GENES UPREGULATED IN MELANOMA RELATIVE TO NORMAL BODY TISSUES
10
          Table 48A lists about 426 genes upregulated in melanoma relative to normal body tissues. These genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip
          array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA
           expression.

TABLE 49A: ABOUT 1127 GENES UPREGULATED IN PRIMARY MELANOMA AND/OR MELANOMA METASTASES RELATIVE TO NORMAL BODY TISSUES

PCT/US02/29560 WO 03/025138

Table 49A lists about 1127 genes upregulated in primary melanoma and/or melanoma metastases relative to normal body tissues. These genes were selected from \$9680 probesets on the Eos/Affymetrix Hut33 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey: Unique Eos probeset identifier number

ExAcon: Exemplar Accession number, Genbank accession number

5

TABLE 52A: ABOUT 204 GENES UPREGULATED IN PRIMARY MELANOMAS RELATIVE TO MELANOMA METASTASES
Table 52A lists about 204 genes upregulated in primary metanomas relative to metanoma metastases. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03
Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

TABLE 53A: ABOUT 298 GENES UPREGULATED IN MELANOMA METASTASES RELATIVE TO PRIMARY MELANOMAS

Table 53A lists about 298 genes upregulated in melanoma metastases relative to primary melanomas. Genes were selected from 59680 probesets on the Eos/Alfymetrix Hu03

Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression. Unique Eos probeset identifier number
Exemplar Accession number, Genbank accession number
Unigene number
Unigene number
Unigene gene title
90th percentile of melanoma metastasis Als divided by the 90th percentile of primary melanoma Als
90th percentile of melanoma metastasis Als divided by the 90th percentile of primary melanoma Als, where the 15th percentile of normal tissue Als was subtracted from both the numerator and denominator

> TABLE 54A: ABOUT 151 GENES UPREGULATED IN PRIMARY MELANOMAS FROM TUMORS THAT LATER METASTASIZED RELATIVE TO PRIMARY MELANOMAS THAT DID NOT METASTASIZE LATER

Table 54A lists about 161 genes upregulated in primary metanomas from tumors that later metastasized relative to primary metanomas that did not metastasize later. These genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average 15 intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey: Unique Eos probeset identifier number

Exemplar Accession number, Genbank accession number ExAcon:

UnigenetD: Unigene Title: Unigene number Unigene gene title 20

90th percentile of Als for primary melanomas that later metastasized divided by the 90th percentile of Als for primary melanomas that did not metastasize later 90th percentile of Als for primary melanomas that did not metastasize later, where the 15th percentile of normal tissue Als was subtracted from both the numerator and denominator R1: R2:

TABLE 55A: ABOUT 201 GENES UPREGULATED IN PRIMARY MELANOMAS FROM TUMORS THAT DID NOT METASTASIZE RELATIVE TO PRIMARY MELANOMAS THAT LATER METASTASIZED 15

LATER METASTASIZED

Table 55A lists about 201 genes upregulated in primary melanomas from tumors that did not metastasize relative to primary melanomas that metastasized later. Genes were selected from 59880 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey: Unique Eos probeset identifier number

ExAcon: Exemplar Accession number, Genbank accession number

TABLE 56A: ABOUT 277 GENES UPREGULATED IN MELANOMA METASTASES RELATIVE TO BENIGN NEVI
Table 56A lists about 277 genes upregulated in melanoma metastases relative to benign nevi. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip
array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA

expression. Pkey: ExAcon: Unique Eos probeset identifier number Exemplar Accession number, Genbank accession number Unigene number 5

UnigeneID: Unigene Title:

Unigene gene file
Toth percentile of melanoma metastasis Als divided by the maximum of benign nevi Als
Toth percentile of melanoma metastasis Als divided by the maximum of benign nevi Als, where the 15th percentile of normal tissue Als was subtracted from both
the numerator and denominator R1: R2: 10

TABLE 58A: ABOUT 183 GENES UPREGULATED IN MELANOMA METASTASES FROM PATIENTS WITH LIMITED DISEASE RELATIVE TO MELANOMA METASTASES FROM PATIENTS WITH PROGRESSIVE DISEASE
Table 58A lists about 183 genes upregulated in melanoma metastases from patients with limited disease relative to melanoma metastases from patients with progressive disease.
Genes were selected from 59680 probesets on the Eos/Affymetrix Hu/03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the retative level of mRNA expression.

Pkey: Unique Eos probeset identifier number
ExAcon: Exemplar Accession number, Genbank accession number
UnigenelD: Uniquene number
Uniquene Title: Uniquene gene title
R1: 90th percentite of Als for metastases from patients with limited disease divided by 90th percentite of Als for metastases from patients with progressive disease,
R2: 90th percentile of Als for metastases from patients with limited disease divided by 90th percentite of Als for metastases from patients with progressive disease,
where the 15th percentile of normal tissue Als was subtracted from both the numerator and denominator

TABLE 59A: ABOUT 201 GENES UPREGULATED IN MELANOMA METASTASES FROM PATIENTS WITH PROGRESSIVE DISEASE RELATIVE TO MELANOMA METASTASES FROM PATIENTS WITH LIMITED DISEASE

PCT/US02/29560 WO 03/025138

Table 59A lists about 201 genes upregulated in melanoma metastases from patients with progressive disease relative to melanoma metastases from patients with limited disease. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Unique Eos probeset identifier number

ExAccn: Exemplar Accession number, Genbank accession number

UniquenelD: Uniquene umber

Uniquene Title: Unique gene title

R1: 90th percentifier of Alls for metastases from nationts with progression disease divided by the D0th percentifier of Alls for metastases from nationts with trivial

5

Unique of normalization from the control of the state of R1:

uscase 90th percentile of Als for metastases from patients with progressive disease divided by the 90th percentile of Als for metastases from patients with limited disease, where the 15th percentile of normal tissue Als was subtracted from both the numerator and denominator 10 R2:

		disease	e, where the 1501	beloailile of normal basise via was adoptioned norm outside in		-

Sequence source. The 7 digit numbers in this column are Genbank Identifier (GI) numbers. "Dunham, et al." refers to the publication entitled "The DNA sequence of human chromosome 22" Dunham, et al. (1999) Nature 402:489-495. Indicates DNA strand from which exons were predicted.

Strand: Nt_position: Indicates nucleotide positions of predicted exons.

TABLE 62A: ABOUT 121 GENES UPREGULATED IN BENIGN NEVI RELATIVE TO NORMAL SKIN
Table 62A lists about 121 genes upregulated in benign nevi relative to normal skin. These genes were selected from 59680 probesets on the Eos/Aflymetrix Hu03 Genechip array.
Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.
Pkey:

TABLE 63A: ABOUT 181 GENES UPREGULATED IN BENIGN NEVI RELATIVE TO MELANOMA METASTASES
Table 63A fists about 181 genes upregulated in benign nevi relative to melanoma metastases. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA 5 expression.

Unique Eos probeset identifier number Exemplar Accession number, Genbank accession number Unigene number

35	TABLE 64A: ABOUT 929 GENES DOWNREGULATED IN PRIMARY MELANOMAS AND/OR MELANOMA METASTASES RELATIVE TO NORMAL SKIN Table 64A lists about 929 genes downregulated in primary melanomas and/or melanoma metastases relative to normal skin. Genes were selected from 59680 probesets on the Eos/Affymetrix Hud3 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.  Pkey: Unique Eos probeset identifier number ExAcon: Exemplar Accession number, Genbank accession number

TABLE 65A: ABOUT 838 GENES DOWNREGULATED IN BENIGN NEVI RELATIVE TO NORMAL SKIN
Table 65A lists about 838 genes downregulated in benign nevi relative to normal skin. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene
expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.
